Phone: (718) 369-1200

Fax: (718) 223-2932

PATIENT NAME: DOB: Eliezer Bueno

3/2/1986

DATE OF SERVICE:

5/11/2022

REFERRING DOCTOR: Adnan A. Qureshi, M.D.

MRI Right Knoe:

TECHNIQUE: Magnetic Resonance Imaging Is Performed In Multiple Projections Utilizing T1/T2 Pulse Sequences.

FINDINGS:

Supra and infrapatellar plica. Partial anterior cruciate ligament tear, thickening, heterogeneity. Posterior cruciate ligament is unrevealing. Tear of the posterior hom of the medial meniscus. Discoid shaped lateral meniscus. Partial lateral collateral ligament and lateral capsular tear, consider lateral trauma. Iliotibial band syndrome on the coronal dataset. Bone island of the distal femur.

IMPRESSION:

- 1. Distal femoral bone island incidentally.
- 2. Partial lateral collateral ligament and lateral capsular tear.
- 3. Iliotibial band syndrome.
- 4. Partial anterior cruciate ligament tear.
- 5. Tear of the posterior horn of the medial meniscus.
- 6. Supra and infrapatellar plica.
- 7. Hypertrophic tibial tuberosity.
- 8. Quadriceps and patellar tendinosis and tendinitis.

Thank you for the courtesy of this consultation.

Robert Solomon, M.D.

Diplomat, American Board of Radiology
