# SKY RADIOLOGY

PATIENT NAME D.O.B.

PATTENT # DATE OF SERVICE

REF. PHYSICIAN

SANTOS, EVA 10/14/1973 0000013461 5/11/2022 9:55:54 AM KOPACH, ALEXANDR MD

### MRI OF THE LEFT FLBOW WITHOUT CONTRAST

INDICATION: MVA. Left elbow pain

TECHNIQUE: T1, T2, and STIR weighted sequences were obtained.

COMPARISON: No prior studies were available for comparison at the time of dictation.

#### FINDINGS:

Osseous structures: No acute fracture or suspicious lesion. Overall marrow signal preserved.

Joint Spaces: Anatomically aligned. No gross erosive change and cartilage overall preserved. No

#### Soft tissues:

There is a small posterolateral radiocapitellar effusion with undersurface hyperintense signal concerning for tear at the insertion of the lateral collateral ligament with slight extension into the annular ligament. There is also associated intrasubstance signal suggestive of concomitant common extensor tendinopathy. Series 7 image 10.

The common flexor tendon is intact. Brachialis tendon is intact. Normal triceps tendon. Biceps

The lateral ulnar collateral ligament is intact. The ulnar collateral ligament is intact.

The median, radial, and ulnar nerves are normal in size and signal.

No other significant joint effusion. Normal muscle signal.

### IMPRESSION:

Small radial capitellar effusion with adjacent signal and irregularity concerning for tears of the radial (lateral) collateral ligament and medial attachment of the annular ligament.
