Re: Kidd, Rojay DOB: 05/07/1993 DOA: 02/22/2022

INITIAL ORTHOPEDIC CONSULT EXAMINATION

CHIEF COMPLAINT: Right shoulder, left shoulder, right knee, and left knee pain.

HISTORY OF PRESENT ILLNESS: A 29-year-old right-hand dominant male involved in a motor vehicle accident on 02/22/2022. The patient was a driver and was wearing a seatbelt. The vehicle was struck on the rear side. The airbags did not deploy. The EMS arrived on the scene. The police were called to the scene of the accident. The patient was transported via ambulance to Jacobi Medical Center and was treated and released the same day. The patient presents today complaining of right shoulder, left shoulder, right knee, and left knee pain sustained in the motor vehicle accident. The patient was attending physical therapy for the last 4 months with little relief.

WORK HISTORY: The patient is currently working.

PAST MEDICAL HISTORY: Noncontributory.

PAST SURGICAL HISTORY: Noncontributory.

DRUG ALLERGIES: NO KNOWN DRUG ALLERGIES.

MEDICATIONS: The patient is taking pain medications p.r.n.

SOCIAL HISTORY: The patient smokes socially. The patient drinks alcohol socially. The patient does not use recreational drugs.

ADL CAPABILITIES: The patient states that he can walk for 4 blocks. He can stand for 180 minutes before he has to sit. He can sit for 20 minutes before needing to change positions

Kidd, Rojay June 15, 2022 Page 2 of 2

secondary to pain. As a direct result of the injuries sustained in this accident, the patient states that he is unable to do the following activities: play sports, driving, lifting heavy objects, carrying heavy objects, reaching overhead, running errands, kneeling, squatting, negotiating stairs, jogging and exercising.

PRESENT COMPLAINTS: Right shoulder: Right shoulder pain is 8/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient has stiffness and weakness. The patient is able to reach overhead, able to reach behind the back, and unable to sleep at night due to pain. Worse with range of motion and improves with physical therapy.

Left shoulder: Left shoulder pain is 6/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient has stiffness and weakness. The patient is able to reach overhead, able to reach behind the back, and unable to sleep at night due to pain. Worse with range of motion and improves with physical therapy.

Right knee: Right knee pain is 8/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient has stiffness and weakness. The patient has no difficulty rising from a chair and has difficulty going up and down stairs. Worse with range of motion and improves with rest.

Left knee: Left knee pain is 5/10, described as intermittent, sharp, stabbing, dull, achy pain. The patient has stiffness and weakness. The patient has no difficulty rising from a chair and has difficulty going up and down stairs. Worse with range of motion and improves with rest.

REVIEW OF SYSTEMS: Temperature taken at the time of exam was 98.6 degrees Fahrenheit.

General: No fever, chills, night sweats, weight gain, or weight loss.

HEENT: No double vision, eye pain, eye redness, decreased hearing, earache, ear ringing, nosebleeds, sore throat or hoarseness.

Endocrine: No cold intolerance, appetite changes or hair changes.

Skin: Clear, no rashes or lesions.

Neuro: No headaches, dizziness, vertigo or tremor.

Respiratory: No wheezing, coughing, shortness of breath or difficulty breathing. **Cardiovascular:** No chest pain, murmurs, irregular heart rate or hypertension.

GI: No nausea, vomiting, diarrhea, constipation, jaundice or changes in bowel habits. **GU**: No blood in urine, painful urination, loss of bladder control or urinary retention.

Hematology: No active bleeding, bruising, anemia or blood clotting disorders. **Psychiatric:** No anxiety, change in sleep pattern, depression or suicidal thoughts.

PHYSICAL EXAMINATION: The patient's height is 5 feet 8 inches, weight is 198 pounds, and BMI is 30.1. The right shoulder reveals tenderness to palpation over supraspinatus tendon region and AC joint. There is no heat, swelling, erythema, crepitus or deformity appreciated. Negative drop arm test. Negative cross-over test. Negative empty can test. Negative Yergason test. Negative deltoid atrophy. Negative O'Brien test. Negative impingement sign. Negative Lift-off test. Negative Hawkins test. Range of motion, as per goniometer, abduction 105/180 degrees, adduction 30/45 degrees, forward flexion 115/180 degrees, extension 40/60 degrees, internal rotation 45/90 degrees, and external rotation 70/90 degrees. Internal rotation to the sacrum. The patient has no motor or sensory deficit of the right upper extremity.

The left shoulder reveals tenderness to palpation over supraspinatus tendon region and AC joint. There is crepitus appreciated. There is no heat, swelling, erythema, or deformity appreciated. Negative drop arm test. Positive cross-over test. Positive empty can test. Positive Yergason test. Negative deltoid atrophy. Negative O'Brien test. Positive impingement sign. Positive Lift-off test. Positive Hawkins test. Range of motion, as per goniometer, abduction 115/180 degrees, adduction 30/45 degrees, forward flexion 120/180 degrees, extension 40/60 degrees, internal rotation 45/90 degrees, and external rotation 75/90 degrees. Internal rotation to the sacrum. The patient has no motor or sensory deficit of the left upper extremity.

The right knee reveals tenderness along the superior pole of patella and inferior pole of the patella. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative McMurray test. Positive Lachman test. Positive patellofemoral grinding test. Positive anterior drawer. Negative posterior drawer. Range of motion reveals flexion 80/130 degrees and extension 4/5 degrees. Knee is stable with varus and valgus stress test. The patient has no motor or sensory deficit of the right lower extremity.

The left knee reveals tenderness along the inferior pole of the patella. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative McMurray test. Positive Lachman test. Positive patellofemoral grinding test. Positive anterior drawer. Negative posterior drawer. Range of motion reveals flexion 95/130 degrees and extension 5/5 degrees. Knee is stable with varus and valgus stress test. The patient has no motor or sensory deficit of the left lower extremity.

DIAGNOSTIC TESTING: MRI of the right shoulder, done on 03/30/2022, shows intact acromioclavicular joint with undersurface hypertrophy, which may be causing impingement. Tendinosis of the supraspinatus tendons with fluid in the glenohumeral joint and the subacromial/subdeltoid bursa. MRI of the left shoulder, done on 03/30/2022, shows intact acromioclavicular joint with undersurface hypertrophy. Tendinosis of the supraspinatus tendon with fluid in the glenohumeral joint and the subacromial/subdeltoid bursa. MRI of the right knee, done on 03/30/2022, shows partial tear of the anterior cruciate ligament. Suprapatellar and intraarticular joint effusion. MRI of the left knee, done on 03/30/2022, shows high grade partial tear of the anterior cruciate ligament. Suprapatellar and intraarticular joint effusion. No acute meniscal tear or osteochondral lesion.

ASSESSMENT:

- 1. M24.811 Internal derangement, right shoulder.
- 2. M75.81 Shoulder tendinitis, right shoulder.
- 3. M75.41 Impingement, right shoulder.
- 4. M75.51 Bursitis, right shoulder.
- 5. M25.511 Pain, right shoulder.
- 6. S49.91XA Injury, right shoulder.
- 7. M89.311 Acromioclavicular joint hypertrophy, right shoulder.
- 8. M25.411 Joint effusion, right shoulder.
- 9. M24.812 Internal derangement, left shoulder.

Kidd, Rojay June 15, 2022 Page 2 of 2

- 10. M75.82 Shoulder tendinitis, left shoulder.
- 11. M75.42 Impingement, left shoulder.
- 12. M75.52 Bursitis, left shoulder.
- 13. M25.512 Pain, left shoulder.
- 14. S49.92XA Injury, left shoulder.
- 15. M89.312 Acromioclavicular joint hypertrophy, left shoulder.
- 16. M25.412 Joint effusion, left shoulder.
- 17. M23.91 Internal derangement, right knee.
- 18. S83.519A Anterior cruciate ligament tear, right knee.
- 19. M25.461 Joint effusion, right knee.
- 20. S80.911A Injury, right knee.
- 21. M25.561 Pain, right knee.
- 22. M23.92 Internal derangement, left knee.
- 23. S83.519A Anterior cruciate ligament tear, left knee.
- 24. M25.462 Joint effusion, left knee.
- 25. S80.912A Injury, left knee.
- 26. M25.562 Pain, left knee.

PLAN:

- 1. Imaging studies and clinical examinations were reviewed with the patient.
- 2. All treatment options discussed with the patient.
- 3. Cold compresses for right shoulder, left shoulder, right knee, and left knee.
- 4. Continue anti-inflammatory and muscle relaxant medications p.r.n.
- 5. Continue physical therapy for right shoulder, left shoulder, right knee, and left knee 3 days/week.
- 6. Recommend steroid injections with pain management for right shoulder, left shoulder, right knee, and left knee. The patient refuses due to side effects.
- 7. Discussed right shoulder, left shoulder, right knee, and left knee arthroscopy versus conservative management with the patient. The patient states that due to continual pain and lack of relief with physical therapy and the inability to perform day-to-day activities due to pain, the patient wants to think about surgery.
- 8. It is medically necessary to perform the suggested surgery to properly diagnose the patient's condition and to objectively verify presence and severity of internal derangement and other right shoulder, left shoulder, right knee, and left knee pathology in quantitative and qualitative terms and achieve better prognosis. This surgery is crucial to provide most specific and maximally effective treatment to this patient.
- 9. Discussed the length of the arthroscopy, the postoperative instructions, and the option of continuing with conservative management alternatives to surgery, including no surgery.
- 10. All the benefits and risks of the right shoulder, left shoulder, right knee, and left knee arthroscopy have been discussed with the patient. The risks include, but not limited to bleeding, infection, pain, stiffness, muscle injury, nerve injury, DVT, and recurrence.
- 11. All the questions in regard to the procedure were answered.
- 12. Follow up in 2 weeks for decision.

<u>CAUSALITY</u>: It is within a certain degree of medical certainty, that the history presented by the patient, the objective physical findings as well as the diagnosis rendered

Kidd, Rojay June 15, 2022 Page 2 of 2

is causally related to the injury the patient incurred on the specified date. These current symptoms were nonexistent prior to the accident. Findings were discussed with the patient.

AFFIRMATION: Being duly licensed to practice medicine in the state of New York, pursuant to the applicable provisions of the Civil Practice Laws and Rules, I hereby affirm under penalty of perjury that the statements contained herein are true and accurate.
