Patient: ALDO ANEUDY LUIS DEL ORBE

Date of Birth: 01-24-1982 **Phone:** (347) 541-2354

MRN: K147557 Acc: KR213058 Date of Exam: 09-16-2022

Exam requested by: BOLESLAV KOSHARSKY MD 96-18 63RD DRIVE STE 202 Rego Park New York 11374

EXAM: MRI-SHOULDER WITHOUT CONTRAST RIGHT

TECHNIQUE: Coronal proton density and coronal proton density fat saturated images as well as sagittal proton density fat saturated images and axial proton density T1 and fat saturated images were obtained in a1.5 tesla Magnet.

INDICATIONS: Status post trauma

FINDINGS: There is a partial tear of the anterior distal insertion of the supraspinatus tendon. There is also a low-grade partial tear of the articular aspect of the posterior distal insertion the infra spinatus tendon.

Remainder of the rotator cuff tendons are intact

There are hypertrophic changes at the acromioclavicular joint with no significant impingment upon the supraspinatus musculotendinous junction.

The marrow signal is normal with no fracture or osteochondral defect

There is no os acromiale.

The extra-articular segment of the biceps tendon is normally located and intact.

The glenoid labrum is unremarkable with no evidence of a tear.

IMPRESSION: Partial rotator cuff tear involving the supraspinatus and infra spinatus tendons, as described above

Thank you for the opportunity to participate in the care of this patient.
