PATIENT NAME: CUMANICHO, SEGUNDO

DATE OF BIRTH: 06/14/1961 MRN #: JM23505 DATE OF SERVICE: 09/09/2022

REFERRING PHYSICIAN: JORDAN FERSEL, MD

EXAM: MRI OF THE LEFT SHOULDER

INDICATION: 61-year-old male with a history of trauma with left shoulder pain.

TECHNIQUE: MRI of the left shoulder was performed using multiplanar and multisequence imaging.

**COMPARISON:** None.

FINDINGS: There is abnormal signal in the supraspinatus tendon consistent with tendinitis. Small partial articular surface tear is not excluded. The subscapularis tendon is somewhat thickened consistent with tendinopathy. There is some intrasubstance increased T2 signal which could represent an intrasubstance tear. The humeral head maintains a normal anatomical relationship with the glenoid. There are subcentimeter cystic changes in the humeral head. The long head of the biceps tendon is within its normal anatomic position within the intertubercular sulcus. The long head of the biceps tendon does not demonstrate any evidence of tendon tear, tendinitis, or tenosynovitis. There is a small amount of fluid in the subcoracoid bursa/subscapularis recess. The glenoid labrum appears intact. There is mild capsular hypertrophy of the acromicclavicular joint. There is moderate inflammation within the acromicclavicular joint. There is bone marrow edema within the acromion and clavicular portion of the AC joint likely related to the adjacent inflammation. There is a curved acromion.

## **IMPRESSION:**

- 1. Supraspinatus tendinitis. Subscapularis tendinopathy with some intratendinous signal which could represent an intrasubstance tear. It does appear grossly intact.
- 2. Small amount of fluid in the sub coracoid bursa and subscapularis recess. Small joint effusion.
- 3. AC arthropathy. Curved acromion. There is moderate inflammation within the acromioclavicular joint. Bone marrow edema within the acromion and clavicular portion of the AC joint likely related to adjacent inflammation.

Thank you for the opportunity to participate in the care of this patient.
