2500 St. Raymond Avenue

Bronx, NY 10461

Phone: (718) 369-1200

Fax: (718) 223-2932

PATIENT NAME:

Jasmine Jackson

DOB:

4/20/1987

DATE OF SERVICE:

11/18/2021

REFERRING DOCTOR: Trishanna Yankannah, PA-C

MRI Right Shoulder:

TECHNIQUE: Magnetic Resonance Imaging is Performed in Multiple Projections Utilizing T1/T2 Pulse Sequences.

## FINDINGS:

The supraspinatus tendon is effaced by abnormal confluent hyperintensity extending to its thickened greater tuberosity insertion. Superior bursal and inferior articular surfaces are undermined. Findings are compatible with tendinitis and partial tear. Frank muscular retraction has not developed.

The visualized glenoid labrum outlines anatomically, Biceps tendon is free from interruption. Some fluid extends along joint capsule and subacromial-subdeltoid bursas. Osseous structures maintain unremarkable alignment and signal characteristics. Suspicion is not raised for fracture, subluxation or replacement process. Smooth humeral head. Acromicclavicular joint remains intact. Coraccacromial arch is without appreciable encroachment. No periarticular mass is declared. Axiila appears clear of lymphadenopathy.

## IMPRESSION:

- 1. Evidence supporting rotator cuff tendinitis and partial tear.
- 2. Associated bursitis.
- 3. No gross bony derangement suspected.

Thank you for the courtesy of this consultation.
