Re: Lewis, Dakur DOB: 10/09/1998 DOA: 10/31/2019

### INITIAL ORTHOPEDIC CONSULT EXAMINATION

**CHIEF COMPLAINT:** Left shoulder and left wrist pain.

HISTORY OF PRESENT ILLNESS: A 23-year-old right-hand dominant male involved in a work-related motor vehicle accident on 10/31/2019. The patient was a driver and was wearing a seatbelt. The vehicle was struck on the passenger's front side. The airbags did not deploy. The EMS did not arrive on the scene. The police were called to the scene of the accident. The patient was transported via ambulance to Montefiore Mount Vernon Hospital in Lawrence and was treated and released the same day. The patient presents today complaining of left shoulder and left wrist pain sustained in the work-related motor vehicle accident. The patient was attending physical therapy for the last 2.5 years with little relief.

**WORK HISTORY:** The patient is currently not working.

**PAST MEDICAL HISTORY:** Noncontributory.

PAST SURGICAL HISTORY: Noncontributory.

**DRUG ALLERGIES:** NO KNOWN DRUG ALLERGIES.

**MEDICATIONS:** The patient is taking pain medications p.r.n.

**SOCIAL HISTORY:** The patient is a nonsmoker. The patient does not drink alcohol. No recreational drugs.

**ADL CAPABILITIES:** The patient states that he can walk for 1 block. He can stand for 20 minutes before he has to sit. He can sit for 10 minutes before needing to change positions secondary to pain. As a direct result of the injuries sustained in this accident, the patient states

Lewis, Dakur May 24, 2022 Page 2 of 2

that he is unable to do the following activities: play sports, driving, lifting heavy objects, carrying heavy objects, reaching overhead, running errands, and exercising.

**PRESENT COMPLAINTS:** Left shoulder: Left shoulder pain is 9/10, described as constant, sharp, stabbing, dull, achy pain. The patient has stiffness, popping, and clicking. The patient is able to reach overhead, able to reach behind the back, and unable to sleep at night due to pain.

Left wrist: Left wrist pain is 7/10, described as intermittent, dull, achy pain. The patient has pain with lifting, carrying, and driving. Worse with range of motion and improves with rest.

**REVIEW OF SYSTEMS:** Temperature taken at the time of exam was 98.6 degrees Fahrenheit.

General: No fever, chills, night sweats, weight gain, or weight loss.

**HEENT**: No double vision, eye pain, eye redness, decreased hearing, earache, ear ringing,

nosebleeds, sore throat or hoarseness.

**Endocrine:** No cold intolerance, appetite changes or hair changes.

**Skin:** Clear, no rashes or lesions.

**Neuro:** No headaches, dizziness, vertigo or tremor.

**Respiratory:** No wheezing, coughing, shortness of breath or difficulty breathing. **Cardiovascular:** No chest pain, murmurs, irregular heart rate or hypertension.

**GI**: No nausea, vomiting, diarrhea, constipation, jaundice or changes in bowel habits. **GU**: No blood in urine, painful urination, loss of bladder control or urinary retention.

**Hematology:** No active bleeding, bruising, anemia or blood clotting disorders. **Psychiatric:** No anxiety, change in sleep pattern, depression or suicidal thoughts.

**PHYSICAL EXAMINATION:** The patient's height is 6 feet 0 inches, weight is 180 pounds, and BMI is 24.4. The left shoulder reveals tenderness to palpation over supraspinatus tendon region, AC joint, proximal biceps tendon, and coracoid. There is crepitus appreciated. There is no heat, swelling, erythema or deformity appreciated. Negative drop arm test. Positive cross-over test. Positive empty can test. Positive Yergason test. Negative deltoid atrophy. Positive O'Brien test. Positive impingement sign. Positive Lift-off test. Positive Hawkins test. Range of motion, as per goniometer, abduction 130/180 degrees, adduction 30/45 degrees, forward flexion 125/180 degrees, extension 40/60 degrees, internal rotation 55/90 degrees, and external rotation 50/90 degrees. Internal rotation to the sacrum. The patient has no motor or sensory deficit of the left upper extremity.

The left wrist reveals pain to palpation over the dorsal with ganglion cyst. Grip strength is 5/5. There is swelling noted. Negative Tinel sign. Negative Phalen test. Range of motion reveals flexion 55/80 degrees, extension 50/70 degrees, radial deviation 15/20 degrees, ulnar deviation 25/30 degrees.

**DIAGNOSTIC TESTING:** MRI of the left shoulder, done on 01/27/2020, shows mild insertional rotator cuff tendinosis. Mild long head of the biceps tenosynovitis. Anterior superior glenoid labral tear. AC joint sprain sequelae. Low-lying acromion morphology.

### **ASSESSMENT:**

1. M75.82 Shoulder tendinitis, left shoulder.

Lewis, Dakur May 24, 2022 Page 2 of 2

- 2. S43.432A Labral tear, left shoulder.
- 3. M65.812 Tenosynovitis, left shoulder.
- 4. M25.512 Pain, left shoulder.
- 5. S49.92XA Injury, left shoulder.
- 6. M25.412 Joint effusion, left shoulder.
- 7. AC joint sprain, left shoulder.
- 8. Post trauma dorsal ganglion cyst, left wrist.

#### **PLAN:**

- 1. Imaging studies and clinical examinations were reviewed with the patient.
- 2. All treatment options discussed with the patient.
- 3. Cold compresses for left shoulder and left wrist.
- 4. Continue anti-inflammatory and muscle relaxant medications p.r.n.
- 5. Continue physical therapy for left shoulder and left wrist 3 days/week.
- 6. Recommend steroid injections with pain management for left shoulder and left wrist. The patient refuses due to side effects.
- 7. MRI ordered of left wrist to rule out ligament tear and/or synovial injury.
- 8. Discussed left shoulder arthroscopy versus conservative management with the patient. The patient states that due to continual pain and lack of relief with physical therapy and the inability to perform day-to-day activities due to pain, the patient would like to proceed with surgery.
- 9. Workers' Compensation Board authorization needed prior to surgery.
- 10. It is medically necessary to perform the suggested surgery to properly diagnose the patient's condition and to objectively verify presence and severity of internal derangement and other left shoulder pathology in quantitative and qualitative terms and achieve better prognosis. This surgery is crucial to provide most specific and maximally effective treatment to this patient.
- 11. Discussed the length of the arthroscopy, the postoperative instructions, and the option of continuing with conservative management alternatives to surgery, including no surgery.
- 12. All the benefits and risks of the left shoulder arthroscopy have been discussed with the patient. The risks include, but not limited to bleeding, infection, pain, stiffness, muscle injury, nerve injury, DVT, and recurrence.
- 13. All the questions in regard to the procedure were answered.
- 14. The patient verbally consents for the arthroscopy of left shoulder and the patient will be scheduled for left shoulder surgery. On the day of the surgery, before the procedure, the surgeon will explain all related questions of the procedure. The patient will sign a written consent and be witnessed by the surgeon.
- 15. The patient will follow up 1-2 weeks postop or in 2 months if surgery has not been performed yet.

## **IMPAIRMENT RATING:** 75%.

<u>CAUSALITY</u>: It is within a certain degree of medical certainty, that the history presented by the patient, the objective physical findings as well as the diagnosis rendered is causally related to the injury the patient incurred on the specified date. These current

Lewis, Dakur
