PATIENT NAME:

ANTHONY WILLIAMS

REFERRING PHYSICIAN:

**JURKOWICH** 

SERVICE:

MRI LEFT SHOULDER

DATE OF SERVICE:

06/21/2022

CLINICAL HISTORY: Pain.

TECHNIQUE: Multiplanar and multisequence images were obtained.

FINDINGS:

BONE MARROW AND OSSEOUS STRUCTURES: The bone marrow signal intensity is normal.

ACROMIOCLAVICULAR JOINT: There is productive change seen at the acromioclavicular joint, which is effacing the subdeltoid fat plane and encroaching on the supraspinatus muscle tendon complex.

ROTATOR CUFF: There is no evidence of tendonitis. The visualized portions of the supraspinatus, infraspinatus, subscapularis and teres minor tendons are within normal limits with regard to signal intensity and morphology. A trace joint effusion is present indicating the presence of synovitis/bursitis.

GLENOHUMERAL JOINT AND LABRUM: There is no evidence of glenohumeral joint subluxation. The anterior labrum and the posterior labrum are grossly normal. The visualized portions of the superior, middle and inferior glenohumeral ligaments are normal.

BICEPS TENDON: The long head of the biceps tendon is of normal morphology, location and signal.

## **IMPRESSION:**

Productive change at the acromioclavicular joint, which is encroaching on the supraspinatus muscle tendon complex.

Trace joint effusion.

MRN: 66869
