PATIENT NAME D.O.B. PATIENT # DATE OF SERVICE REF. PHYSICIAN WELCH, JENNIFER 12/13/1982 0000013495 4/30/2022 10:27:31 AM RYBSTEIN, MARC MD

### MRI OF THE LEFT ELBOW WITHOUT CONTRAST

INDICATION: Left elbow pain

TECHNIQUE: T1, T2, and STIR weighted sequences were obtained.

COMPARISON: No prior studies were available for comparison at the time of dictation.

#### FINDINGS:

Osseous structures: No acute fracture or suspicious lesion. Overall marrow signal preserved.

Joint Spaces: Anatomically aligned. No gross erosive change and cartilage overall preserved. No significant effusion.

#### Soft tissues:

There is a small posterolateral radiocapitellar effusion with extensor insertional tendinopathy and concern for undersurface tear with peritendinous fluid, as well as sprain of the radial (lateral) collateral ligament. Series 5 image 13 and series 7 image 10.

The common flexor tendon is intact. Brachialis tendon is intact. Normal triceps tendon. Biceps tendon is intact.

The lateral ulnar collateral ligament is intact. The ulnar collateral ligament is intact.

The median, radial, and ulnar nerves are normal in size and signal.

Normal muscle signal.

### IMPRESSION:

There is a small posterolateral radiocapitellar effusion with extensor insertional tendinopathy and concern for undersurface toar with peritendinous fluid, as well as sprain of the radial (lateral) collateral ligament. Series 5 image 13 and series 7 image 10.
