RAHMAN, QUAZI MD

MRI OF THE LEFT HIP WITHOUT CONTRAST

INDICATION: Pain

TECHNIQUE: T1, T2, and STIR weighted sequences were obtained.

COMPARISON: None

FINDINGS:

No fracture. The bone marrow signal is normal. Joint narrowing and high-grade cartilage loss at the left hip. Normal pubic symphysis. Normal lumbar spine. Normal sacroiliac joints. No crosive change. No osseous protuberance to suggest impingement.

Diffuse tear of the left hip labrum. The gluteal tendons are intact. Mild trochanteric bursitis. The iliopsoas, rectus femoris, and hamstring tendons are intact. No muscle edema. No joint effusion. The visualized sciatic nerve is normal in size and signal. No soft tissue abnormality of the pelvis.

IMPRESSION:

- 1. Joint narrowing and high-grade cartilage loss at the left hip.
- 2. Diffuse tear of the left hip labrum.
- 3. Mild trochanteric bursitis.

Thank you for this kind referral of this patient.
