MRI OF THE RIGHT KNEE WITHOUT CONTRAST

RE: JACK, MARCUS

Referring physician: Dr. Ross-Distin

DOS: 10/03/2022

Referring physician phone #: (845) 201-5909

DOB: 08/02/1978

CLINICAL INDICATION: Right knee pain. Status post work-related trauma.

TECHNIQUE:

Multiplanar and multisequence MR images of the right knee were obtained.

FINDINGS:

The proximal fibers of the patellar tendon are thickened and edematous, compatible with tendinitis. The quadriceps tendon and iliotibial band are intact.

The anterior cruciate ligament is diffusely edematous, compatible with a grade I sprain. The posterior cruciate ligament, medial collateral ligament, fibular collateral ligament and biceps femoris tendon are intact.

The medial and lateral menisci are intact, without a discrete meniscal tear. No focal cartilaginous defect is seen.

A small, diffuse knee joint effusion is appreciated. The medial and lateral patellar retinacula are intact. The popliteus muscle and tendon are intact. No acute fracture is seen.

IMPRESSION:

1. Grade I sprain of the ACL.

2. Small joint effusion.

3. Tendinitis involving the proximal patellar tendon.

Thank you for the courtesy of this referral.
